

Project: Intermodal Transportation and Pedestrian Safety Project

Recipient: Intermountain Healthcare

Location: Salt Lake City, Utah

Purpose: The requested funds would be used connect a new ambulatory to both the University of Utah Health Sciences campus and to Primary Children's Medical Center via bridges that will allow pedestrians to walk from the end of the nearby light-rail line both into the new ambulatory care complex, and directly, via the bridge, to all of the existing buildings of both institutions across the Health Sciences campus without ever stepping outside. The advantages of reduced traffic and parking congestion from the proximity of the light-rail stop are self evident. Construction will result in the support of a significant number of jobs, and the new facility will provide opportunities for permanent new job development.

Amount: \$2,000,000
